

Abstract

a In order to reduce the data volume in constituting multiple instances from a type, a programming device is ^{provided} ~~proposed~~,
5 having a software tool for processing objects, of which a first object, equipped with data, is provided as model for a second object that has a pointer with which, at the beginning of an access to the second object, the data of the first
10 object can be incorporated into the second object by the software tool.
